Contents

Preface	ix
Participants	xi

Part 1. Turbulence and Cosmic Ray Transport

Galactic Cosmic-Ray Transport in the Global Heliosphere: A Four-dimensional Stochastic Model	3
<i>V. Florinski</i>	
Numerical Simulations of MHD Turbulence in Accretion Disks	9
<i>S. Fromang, J. Papaloizou, G. Lesur, and T. Heinemann</i>	
Simulations of Supersonic Turbulence in Molecular Clouds: Evidence for a New Universality	15
<i>A. G. Kritsuk, S. D. Ustyugov, M. L. Norman, and P. Padoan</i>	
Model of Reconnection of Weakly Stochastic Magnetic Field and its Testing	23
<i>A. Lazarian, E. Vishniac, and G. Kowal</i>	
Numerical Experiments with Shock-Turbulence Interaction	31
<i>S. K. Lele, J. Larsson, A. Bhagatwala, and P. Moin</i>	
Subgrid Models in Turbulent Mixing	42
<i>H. Lim, Y. Yu, J. Glimm, X.-L. Li, and D. H. Sharp</i>	
Numerical Cosmic-Ray Hydrodynamics	47
<i>F. Miniati</i>	
Propagation of Solar Energetic Particles in 3-dimensional Interplanetary Magnetic Fields	53
<i>M. Zhang</i>	
On Challenges for Hypersonic Turbulent Simulations	61
<i>H. C. Yee and B. Sjögren</i>	

Part 2. Astrophysical Flows

Long Duration GRBs and the Birth of Magnetars	73
<i>N. Bucciantini</i>	

Numerical Simulations of the Wardle Instability	80
<i>S. A. E. G. Falle, T. W. Hartquist, and S. van Loo</i>	
Relativistic Simulations of Magneto-rotational Core Collapse	86
<i>J. A. Font, P. Cerdá-Durán E. Müller, and L. Antón</i>	
Simulations of the Gravitationally Confined Detonation Model of Type Ia Supernovae for Multiple Ignition Points	92
<i>G. C. Jordan, C. A. Meakin, N. Hearn, R. T. Fisher, D. M. Townsley, D. Q. Lamb, and J. W. Truran</i>	
An Approach to Solve the Difficulties in the SPH Modeling of Viscous and Free-Boundary Layers	98
<i>G. Lanzafame</i>	
Numerical Simulations of Radiative Shocks in Herbig-Haro Objects with the PLUTO Code	105
<i>A. Mignone, O. Teşileanu, and C. Zanni</i>	
3D MHD Simulations of Disk Accretion onto Magnetized Stars: Numerical Approach and Sample Simulations	112
<i>M. M. Romanova, A. V. Koldoba, G. V. Ustyugova, A. K. Kulkarni, M. Long, and R. V. E. Lovelace</i>	
3D MHD Modeling of Accretion Disks in Close Binaries	118
<i>A. G. Zhilkin and D. V. Bisikalo</i>	
 Part 3. Space Plasma Flows	
Adaptive Mesh Refinement on Curvilinear Grids	127
<i>S. N. Borovikov, I. A. Kryukov, and N. V. Pogorelov</i>	
Recent Advances in Electric Sail Development	135
<i>P. Janhunen</i>	
Numerical Simulation of Interplanetary Disturbances	141
<i>D. Odstrcil</i>	
Multi-scale Fluid-Kinetic Simulation Suite: A Tool for Efficient Modeling of Space Plasma Flows	149
<i>N. V. Pogorelov, S. N. Borovikov, V. Florinski, J. Heerikhuisen, I. A. Kryukov, and G. P. Zank</i>	
An MHD Solar Wind Model with Turbulence Transport	160
<i>A. V. Usmanov, W. M. Matthaeus, B. Breech, and M. L. Goldstein</i>	
 Part 4. Kinetic and Hybrid Simulations	
Hybrid Particle–Fluid Methods for Nonequilibrium Gas and Plasma Flows	169
<i>I. D. Boyd</i>	

Tsallis Statistics for Models and Observations of the Heliospheric Magnetic Field 181
L. F. Burlaga

Kinetic Modeling of Neutral Atom Transport in the Heliosphere 189
J. Heerikhuisen, N. V. Pogorelov, V. Florinski, G. P. Zank, and V. Kharchenko

Fast Deterministic Methods for the Boltzmann Equation 199
S. Rjasanow

Part 5. Numerical Methods, Algorithms, and Frameworks

High-Order Finite-Volume Methods on Locally-Structured Grids 207
P. Colella, M. Dorr, J. Hittinger, P. W. McCorquodale, and D. F. Martin

The ECHO Code for Classical and Relativistic MHD 217
L. Del Zanna

New Developments in Modeling MHD Systems on High Performance Computing Architectures 223
K. Germaschewski, J. Raeder, D. J. Larson, and A. Bhattacharjee

Solving Partial Differential Equations on Overlapping Grids 231
W. D. Henshaw

Parsek2D: An Implicit Parallel Particle-in-Cell Code 237
S. Markidis, E. Camporeale, D. Burgess, Rizwan-uddin, and G. Lapenta

A New Multidimensional Unsplit MHD Solver in FLASH3 243
D. Lee, A. E. Deane, and C. Federrath

Adaptive Mesh Refinement Computation of Turbulent Flows – Pitfalls and Escapes 249
S. M. Mitran

A Comparison of Spectral Element and Finite Difference Methods Using Statically Refined Nonconforming Grids for the MHD Island Coalescence Instability Problem 255
C. S. Ng, D. Rosenberg, A. Pouquet, K. Germaschewski, and A. Bhattacharjee

Fast and Robust Integration of N-body Systems 261
Y. A. Omelchenko and H. Karimabadi

A Finite-Volume Dynamical Core on the Cubed-Sphere Grid 268
W. M. Putman and S.-J. Lin

The Athena MHD Code: Extensions, Applications, and Comparisons to ZEUS 277
J. M. Stone

Hall MHD on Block-Adaptive Grids 287
G. Tóth, Y.-J. Ma, and T. I. Gombosi

Elliptic Solvers For Structured Adaptive Mesh Refinement	293
<i>B. Van Straalen, P. Colella, D. Graves, T. Ligocki, and N. Keen</i>	

Part 6. Data Handling and Visualization

Modern Scientific Visualization is More than Just Pretty Pictures	301
<i>E. Wes Bethel, O. Rübel, Prabhat, K. Wu, G. H. Weber, V. Pascucci, H. Childs, A. Mascarenhas, J. Meredith, and S. Ahern</i>	
A Visual Insight into the Horizon Simulation at MareNostrum	317
<i>D. Pomarède, Y. Fidaali, and R. Teyssier</i>	
Author Index	323

Preface

The systemwide Institute of Geophysics and Planetary Physics (IGPP) at the University of California and the Institute for the Investigation of the Fundamental Laws of the Universe of the French Commissariat of Atomic Energy (CEA/Saclay – IRFU) organized the 3rd annual International Conference on Numerical Modeling of Space Plasma Flows (ASTRONUM-2008) on June 8–13, 2008 at the Westin Hotel, St. John, U.S. Virgin Islands. The Program Committee consisted of Edouard Audit (CEA/Saclay – IRFU, co-chair), Phillip Colella (Lawrence Berkeley National Laboratory), Tomoyuki Hanawa (Chiba University, Japan), James Stone (Princeton University), Nikolai Pogorelov (currently in the University of Alabama in Huntsville, chair), H. C. Yee (NASA Ames Research Center), and G. P. Zank (currently in the University of Alabama in Huntsville).

The conference attracted 64 scientists representing many different branches of the space physics and astrophysics simulation communities. The distinctive feature of this conference is a combination of diverse research topics, all of which are essential for performing high-resolution, continuum mechanics and particle, simulations of physical phenomena in space physics and astrophysics. Among such topics were software packages for modeling and analyzing plasma flows; advanced numerical methods for space, astrophysical and geophysical flows; large-scale fluid-based, kinetic, and hybrid simulations; turbulence and cosmic ray transport; magnetohydrodynamics. The applications included cosmology and galaxy formation, physics of the Sun-heliosphere-magnetosphere environments, interstellar medium and star formation, stellar physics, hypersonic turbulence, MHD modeling of plasma flows around space vehicles, etc. The proceedings volume is structured so that it covers all these topics. The conference allowed modelers working in seemingly distant fields to share their scientific achievements with the broad community of computational scientists doing numerical experiment.

As during previous conferences of this series, we were interested in such systems that are coupled across a multiplicity of spatial and temporal scales via collision-like integral terms that incorporate processes as diverse as chemical kinetics, charge-exchange, coagulation, etc. Numerical modeling of such systems usually generates extremely large data sets (hundreds of gigabytes), which require efficient analysis via parallel visualization techniques. For this reason, we invited experts in space physics, astrophysics, applied mathematics, and computer science, especially data handling and visualization, to share their experience in producing scientific insight into physical processes represented by abstract data.

The volume describes both the application of numerical methods and the algorithms themselves. This allows us to discuss the challenges theory imposes on numerical schemes for solving partial differential equations describing plasma in different physical environments.

We would like to thank the participants who submitted their papers for Proceedings of ASTRONUM-2008 and especially those who agreed to review the manuscripts thus ensuring a high quality of this publication. We also are grateful

to Adele Corona from the International Conferencing and Networking Solutions (www.icensmeetings.com) for the excellent management of the conference.

The book will be useful to graduate and postgraduate students majoring in space physics, astrophysics, numerical, engineering, and applied mathematics. It is also aimed at the attention of specialists in applied mathematics and various fields of physics involving flows of partially ionized plasma both on the collisional and collisionless level.

Nikolai V. Pogorelov, Edouard Audit, Phillip Colella, and Gary P. Zank

Participants

AUDIT, EDOUARD, CEA/IRFU/Saclay, Batiment 709, F-91191 Gif-sur-Yvette Cedex, FRANCE <edouard.audit@cea.fr>
